

We are pleased to announce novelties not included in the catalogue!

Las/Lailps type 3-axle articulated tarpaulin wagons

The 3-axle articulated wagons with sliding tarpaulin type Las, later Lails/Lailps, were built from 1974 onwards by SNAV in collaboration with EVS on the basis of the chassis of a 3-axle car transport wagon already built by SNAV itself. Initially they were purchased by EVS (France) and Indesit (Italy), later also by Transfesa (Spain) - in the version with variable-gauge axles introduced in 1976 - and by Ausiliare Milano (Italy). In the following years further sub-series with small variations were delivered. In the course of time, some of these wagons were also leased or sold to other companies, with corresponding changes of logos.

They are still used today for transporting large palletised goods that must be transported out of the weather and require a large manoeuvring space to be loaded, either in homogeneous compositions or in isolated units together with wagons of other types.

Product characteristics

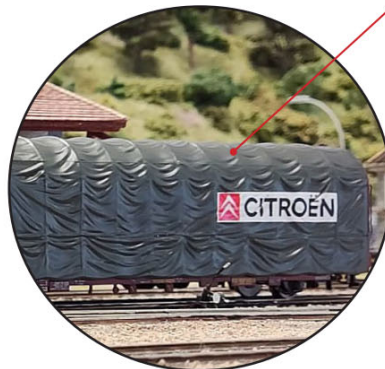

- New running numbers and variants.
- Extremely realistically reproduced tarpaulin.
- Extreme and intermediate heads with numerous reproduced details.
- Central articulation for optimum running
- Couplers pockets according to NEM 362 with short-coupling cinematic on the heads
- Accurate reproduction of decorations according to variants.

Central articulation for optimum running quality.

Extremely realistically reproduced tarpaulin.

Las/Lailps type 3-axle articulated tarpaulin wagons are now available on our website!
