Accessori

4045-375 acqua modellistica 375 ml
 4045-750 acqua modellistica 750 ml

Aquafine è un sistema di resina da colata bicomponente ottimale per la rappresentazione realistica e assolutamente prototipica di modelli d'acqua.

Il contenitore è predosato con un disaeratore e consente quindi di ottenere risultati privi di bolle. Il rapporto di miscelazione è 100:60, anch'esso predosato e pronto per l'uso immediato. Mescolare bene l'indurente e la resina e il gioco è fatto. Il pot life è di circa 45 minuti, dopo circa 24 ore la superficie è asciutta. Aquafine non attacca Styrofoam, Styrodur o materiali simili e non emana praticamente alcun odore. È necessario assicurarsi che il substrato sia ben sigillato e livellato. Le istruzioni dettagliate per l'uso sono allegate.

Contenitore di catalizzatore e resina.

Il nostro consiglio: è possibile "colorare" l'acqua del modello con pigmenti colorati e regolare così la colorazione o l'intorbidimento dell'acqua, a seconda della propria immaginazione.

Colla multiuso Tesa

T-0045 45gr.
 T-0091 90gr.
 T-1750 1.750 gr.

Colla per floccatura dell'erba

800-01 1000 gr.
 800-02 500 gr.
 800-03 250 gr.
 800-04 250 gr Pumpspray

Sono disponibili materiali per il fogliame e per l'agugliatura

- In 4 misure:
